Hyperparameter tunning with Grid Search:

Parameter Grid and Trial Selection

The parameter grid consisted of the following values:

- Swarm Size: 40, 60, 80, 100, 120 (5 values)
- Max Iterations: 250, 350, 450, 550 (4 values)
- Employed Ratio: 0.35, 0.40, 0.45, 0.50, 0.55, 0.60 (6 values)
- Onlooker Ratio: 0.20, 0.25, 0.30, 0.35, 0.40 (5 values)
- Limit: 20, 25, 30, 35 (4 values)

This leads to a total of possible parameter combinations in the full grid.

From these, 300 trials were selected for evaluation as a representative sample to effectively explore the parameter space while managing computational resources.
